Applicant's election of Group I in the reply filed on 10/16/06 is acknowledged. Because applicant did not distinctly and specifically point out any errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-22 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claim 11 of U.S. Patent No. 6,649,174. Although the conflicting claims are not identical, they are not patentably distinct from each other because the instant independent claims encompass the patent claim regarding the film forming agent and ratio.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1,2, 4-8, 11-19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Touzan et al in view of Shah et al.

Touzan et al teach a two phase composition for cleansing containing a demixing agent(title, abstract). An aqueous and separate oily phase in a ratio of 30:70-60:40 is disclosed (abstract). Isohexadecane, liquid paraffins, and silicone oils including cyclopentadimethylsiloxane are disclosed (column 4 lines 1-20). Colorants are specified (column 4 line 25).

Shah et al teach a polyvinylpyrrolidone/vinyl acetate copolymer at 1-5% to maintain pigments in suspension (column 4 lines 37-57).

It would have been obvious to one of ordinary skill to add a polyvinylpyrrolidone/vinyl acetate copolymer to the composition of Touzan et al for the beneficial effect of maintaining colorants in suspension in view of Shah et al.

Claims 1, 2, 4-8, 10-22 are rejected under 35 U.S.C. 103(a) as being unpatentable over Nagy et al in view of Grollier et al

Nagy et al teach a makeup removing composition comprising two phases and a demixing agent (abstract). A 30:70-0:30 ratio of oil to aqueous phase is disclosed

(column 3 lines 12-14). Mixtures of cyclic silicones, dimethicone and a volatile C16 paraffin are specified (column 4 lines 33-53).

Grollier et al teach two phase compositions comprising a cationic polymer for skin conditioning (abstract). Vinyl pyrrolidone-acrylamide copolymers are specified at 0.2-50% (column 8 lines 1-26, column 9 lines -24).

It would have been obvious to one of ordinary skill to add a vinyl pyrrolidone-acrylamide copolymer to the composition of Nagy et al to achieve the beneficial effect of a skin conditioner in view of Grollier et al.

No claims allowed.
